

# Desk/1000 series

Now customers can interact while checking out

- Speed up the payment for Desk/series terminals
- Manage customer interface for any payment
- Compact and nimble design fits on any countertop
- Affordable and reliable
- Sustainable design and packaging

**Specialised checkout devices now include an extension that not only covers any payment validation method, but also encourage interaction for customers.**

The banking PIN Pad Desk/1000 series comes in two variations. While Desk/1200 focuses on contactless capture and PIN entry, the Desk/1500 can accept all traditional payment methods. Nimble in design, the smaller Desk/1000 series takes the place of other Desk/series terminals at checkout, creating space on a potentially busy countertop.

## Reduces checkout time

Payment validation is better when synchronised with the customer and however they want to pay. Equipped with a clear contactless zone, large keypad and an advanced consumer display, the Desk/1000 series enhances usability and accelerates the checkout.

## Designed for your space

The compact Desk/1000 series fits easily on any counter, with options for either a mounted or unmounted terminal to suit the available desktop space. To save space, the Desk/1000 series can act in place of the larger Desk/5000 terminal.

## Because compliance matters

The Desk/1000 series is certified and fully compliant with the latest global and local PCI regulations to ensure long-term payment security compliance – protecting data for years to come.

## Instantly enhanced

With plug-and-play installation and USB connection, the Desk/1000 series connects to any Desk/series device, offering a speedy and unified solution.

## Compatible with Ingenico's suite of services

The Desk/1000 series works in unison with Ingenico's supporting service platforms, meaning merchants will have access to business services such as back office reporting and e-receipt management. Software updates and day-to-day support deliver a hassle-free experience for those using this innovative range.
